

Profile D5CLIP

Decking with clips system

- ☞ Thermally modified
- ☞ For exterior and interior use
- ☞ Use with CLIPS system rails and clips
- ☞ Quick and easy installation
- ☞ Long-lasting
- ☞ 100% natural, reusable
- ☞ High dimensional stability

Additional Features

T&G END-
MATCHING

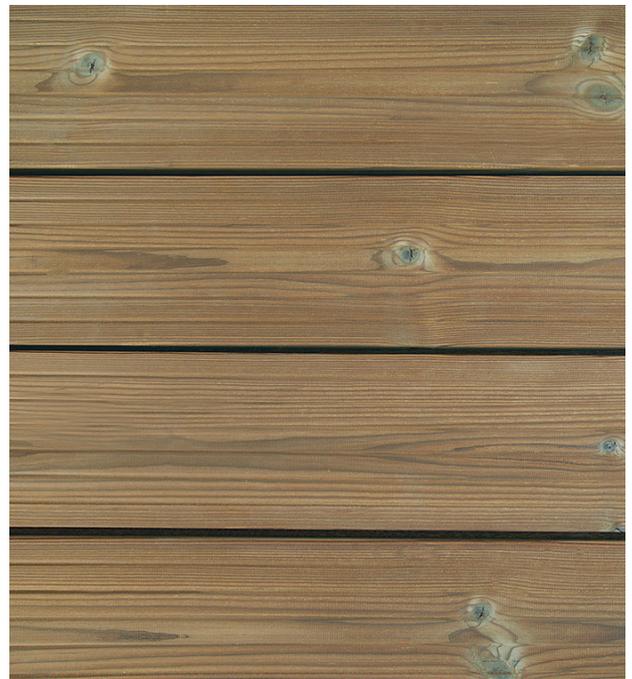

Thermal modification is a 100% natural method for increasing the durability and dimensional stability of wood, likewise for reducing water absorption. During the process, the wood is heated to a temperature of 180-220°C, while lowering the moisture content of the wood up to 4-6%. Thermoarena conducts careful quality control of the wood before and after thermal modification. The lumber used for TM is checked and certified.

DECKING WITH CLIPS SYSTEM

Technical data

| Profile | D5CLIP | Coverage m/m ² | in pack m/m ³ |
|----------|-------------------|------------------------------|-----------------------------|
| | 26 x 117 | 8,13 | 328 |
| | 26 x 140 | 6,85 | 274 |
| Species: | Scandinavian Pine | | |
| Length: | 1.8 - 5.1 m | | |

Please follow Thermoarena's installation instructions when working with thermal wood
